APPENDIX D
DataVal Data Validation Summary Reports

Third Quarter 2006

TO: Joshua Graber, Treadwell & Rollo, Inc.

November 29, 2006

FROM: Donna Breaux, DataVal, Inc. DB 11/29/06

T&R Project No. 2893.04

**DATA VALIDATION SUMMARY REPORT FOR THE THIRD QUARTER 2006
GROUNDWATER MONITORING, THE PRESIDIO OF SAN FRANCISCO, CA****PRIMARY LABORATORY: Curtis & Tompkins, Ltd., Berkeley, CA****QC SPLIT SAMPLE LABORATORY: Columbia Analytical Services, Inc., Redding, CA****SAMPLING DATES: August 15, 16, 17, 18 and 21, 2006**

Data validation of Level III laboratory data packages was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan, April, 2001; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Organic Data Review, October, 1999; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, June, 2001; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004.

The data were reviewed for holding times, surrogate recoveries, laboratory blanks, laboratory control samples, laboratory duplicate samples, matrix spikes and matrix spike duplicates, GC/MS tunes, performance evaluation mix standards, ICP interference check standards, ICP serial dilutions, initial calibrations, continuing calibration verification standards, internal standards and field QC samples.

The following paragraphs highlight the essential findings of the data validation effort:

I. Volatile Organic Compounds (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section I.

A. Reporting Limits

The laboratory reporting limits for VOCs in water matrix samples met the project required reporting limits, with the following exception:

1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane, and chloromethane. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L.

- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exception:
1. Source blank DW082106B (188869-001) had a detected level of acetone at 16 ug/L. Project sample association with this source blank could not be established, and qualification was not required.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- G. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.
- H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration verification standards associated with the project samples, with the following exceptions:
1. The 8/16/06 at 13:34 water matrix continuing calibration verification (CCV) standard analyzed on instrument MSVOA09 had bromomethane with a percent difference (%D) less than the +/-25%D acceptance criteria at -38%. The results for bromomethane in the associated samples were non-detect and qualified as estimated (UJ).
 2. The 8/21/06 at 8:47 water matrix CCV analyzed on instrument MSVOA09 had bromomethane with a %D less than the +/-25%D acceptance criteria at -27%. The results for bromomethane in the associated samples were non-detect and qualified as estimated (UJ).
- See Table 2 of this report for a summary of samples qualified for continuing calibration verification standard percent difference failure.

- J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

II. **N-Nitrosodimethylamine (NDMA) by GC/MS (1625C)**

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
A project required reporting limit for NDMA in water matrix samples was not listed in the QAPP.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Labeled Compound Recoveries
Labeled compound recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks or field QC blanks associated with the project samples, with the following exceptions:
1. Method blank B11714 had a detected level of n-nitrosodimethylamine at 0.0006 ug/L. The levels of n-nitrosodimethylamine present in the project samples were greater than five times the blank amount or were non-detect, and qualification was not required.
 2. Source blank DW081706A (188837-012) had a detected level of n-nitrosodimethylamine at 0.0121 ug/L. The project samples were non-detect for NDMA, and qualification was not required.
 3. Source blank DW082106B (188869-001) had a detected level of n-nitrosodimethylamine at 0.0417 ug/L. Project sample association with this blank could not be established, and qualification was not required.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. GC/MS Tunes
GC/MS tunes were not analyzed in association with the project samples. The requirement to analyze a decafluorotriphenylphosphine (DFTPP) tuning standard applies only in full scan mode.

- H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.
- J. Internal Standards
Internal standard areas and retention times could not be verified with the information provided in the data package.

III. Total Petroleum Hydrocarbons (TPH) - Gasoline/Stoddard Solvent (8015B)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limit for TPH-gasoline in water matrix samples met the project required reporting limit. A project required reporting limit was not provided for Stoddard solvent in the project QAPP.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

IV. Total Petroleum Hydrocarbons – Diesel/Fuel Oil Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for TPH-diesel and TPH-fuel oil in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:

1. The percent recoveries for diesel were outside the 65%-135% project acceptance criteria in QC samples 1349MW100 (188802-001) MS/MSD. The amount of diesel present in the parent sample was greater than four times the amount spiked and qualification was not required. (QC Batch 116703)

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

V. Aromatic Volatiles by GC (8021B)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section D.

A. Reporting Limits

The laboratory reporting limits for benzene, toluene, ethylbenzene, xylenes and methyl tertiary-butyl ether in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exception:

1. Source blank DW081706A (188837-012) had a detected level of methyl tertiary-butyl ether at 6.8 ug/L. The detected results for methyl tertiary-butyl ether in the associated project samples were changed to non-detect (U) if those values were less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to blank contamination.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples. Data was reported from two columns. Samples associated with CCVs with %Ds that failed criteria on one column did not require qualification if results were reported from the column in control. Those failures were not noted in this report.

VI. Organochlorine Pesticides (8081A)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections C, F and I.

A. Reporting Limits

The laboratory reporting limits for pesticides in water matrix samples met the project-required reporting limits, with the following exception:

1. The results for various pesticides in sample 1349MW100 (188802-001) were reported as non-detect at a three-fold dilution. The reporting limits were raised by the dilution factor.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. The percent recoveries for surrogates 2,4,5,6-tetrachloro-meta-xylene (TCMX) and/or decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in several project samples. The compounds associated with surrogate TCMX (alpha-BHC, beta-BHC, delta-BHC, gamma-BHC, aldrin, heptachlor, heptachlor epoxide and endosulfan I) and the compounds associated with surrogate DCB (alpha-chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, endosulfan II, endosulfan sulfate, endrin, endrin ketone, gamma-chlordane, methoxychlor and toxaphene) were qualified as estimated with a low bias (J-/UJ). The following table lists the project samples that required qualification.

Project Sample Name	Laboratory Sample ID	DCB % Recovery	TCMX % Recovery
BB1PZ101	188774-002	45%	79%
1349MW100	188802-001	63%	61%
1349MW102	188837-004	43%	67%
LF5GW102	188837-013	66%	63%
DW082106B	188869-001	67%	62%

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:

1. The percent recoveries for 4,4'-DDT, dieldrin, endrin, gamma-BHC and heptachlor were outside the 65%-135% project acceptance criteria in QC samples 1349MW100 (188802-001) MS/MSD. The amounts of gamma-BHC and heptachlor present in the parent sample were greater than four times the amounts spiked and qualification was not required. The result for dieldrin in the parent sample was non-detect and qualification was not required. The results for 4,4'-DDT and endrin in the parent sample were detected and qualified as estimated with a low bias (J-). (QC Batch 116604)

See Table 2 of this report for a summary of qualifications due to MS/MSD percent recovery failure.

G. Performance Evaluation Mix (PEM) Check Standards

All PEM check standards met the project degradation criteria of 20% for endrin and 4,4'-DDT. Data was reported from two columns. PEM standards with percent degradations that failed criteria on one column did not require qualification if sample results were reported from the column in control. Those failures were not noted in this report.

H. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

I. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. Data was reported from two columns. Continuing calibration verification standards with percent differences that failed criteria on one column did not require qualification if the results were reported from the column in control. Those failures were not noted in this report.
2. Qualification was not required for samples with non-detect results associated with high-failing CCV standards. Those failures were not noted in this report.
3. The 8/23/06 at 15:44 water matrix CCV analyzed on instrument GC23, channel A, had eight compounds with %Ds less than the +/-15%D acceptance criteria: gamma-BHC (-16%), heptachlor (-16%), gamma-chlordane (-16%), endosulfan I (-16%), endrin (-17%), 4,4'-DDD (-16%), 4,4'-DDT (-18%) and endosulfan sulfate (-16%). The results for these compounds in the associated samples were qualified as estimated with a low bias (J-/UJ).
4. The 8/29/06 at 22:33 water matrix CCV analyzed on instrument GC16, channel A, had two compounds with %Ds less than the +/-15%D

acceptance criteria: 4,4'-DDT (-18%) and methoxychlor (-19%). The results for 4,4'-DDT and methoxychlor in the associated samples were non-detect and qualified as estimated (UJ).

5. The 8/30/06 at 2:05 water matrix CCV analyzed on instrument GC16, channel A, had eight compounds with %Ds less than the +/-15%D acceptance criteria: delta-BHC (-18%), heptachlor (-19%), aldrin (-16%), heptachlor epoxide (-16%), alpha-chlordane (-18%), 4,4'-DDT (-31%), methoxychlor (-30%) and endosulfan sulfate (-18%). The results for these compounds in the associated samples were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of samples qualified for continuing calibration verification standard percent difference failure.

VII. Polychlorinated Biphenyls (PCBs) (8082)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections B and C.

A. Reporting Limits

The laboratory reporting limits for PCBs in water matrix samples met the project required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples, with the following exception:

1. Sample 1349MW100 RE (188802-021) was extracted two days past the seven-day extraction holding time for PCB analysis. The sample results were non-detect and qualified as estimated (UJ). The sample was originally extracted within the holding time as 1349MW100 (188802-001). Failed surrogate recoveries below 30% would have resulted in rejected data for the original extraction; therefore, data from the re-extraction was used.

See Table 2 of this report for a summary of qualifications due to missed extraction holding times.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. The percent recoveries for surrogates 2,4,5,6-tetrachloro-meta-xylene (TCMX) and/or decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in two project samples. The compounds associated with surrogate TCMX (PCB-1016, PCB-1221, PCB-1232 and PCB-1242) and the compounds associated with surrogate DCB (PCB-1248, PCB-1254 and PCB-1260) were non-detect and qualified as estimated (UJ). The following table lists the project samples that were qualified due to these QC failures.

Project Sample Name	Laboratory Sample ID	DCB % Recovery	TCMX % Recovery
LF6GW103	188802-008	39%	96%
1349MW100 RE	188802-021	37%	31%

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples. Data was reported from two columns. Continuing calibration verification standards with percent differences that failed criteria on one column did not require sample qualification if the reported results were from the column in control. Those failures were not noted in this report.

VIII. Polynuclear Aromatic Hydrocarbons (PAHs) by HPLC (8310)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Section F.

- A. Reporting Limits
The laboratory reporting limits for PAHs in water matrix samples met the project required reporting limits, with the following exceptions:
1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.12-1 of the QAPP for anthracene and fluoranthene. The laboratory reported 0.5 ug/L for anthracene and 0.4 ug/L for fluoranthene. The project required reporting limit for these compounds was 0.2 ug/L.

- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:
1. Surrogates were reported from two wavelengths. Surrogate recoveries that failed criteria at one wavelength did not require qualification of sample results if the surrogate recoveries at the alternate wavelength met criteria. Those failures were not noted in this report.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:
1. In QC samples 1349MW100 (188802-001) MS/MSD, the percent recoveries were outside the 65%-135% project acceptance criteria for benzo(a)pyrene (25%/26%), fluorene (440%/193%) and pyrene (18%/149%). The percent recovery for naphthalene was outside the 50%-135% project acceptance criteria at 0%/0%. In addition, the relative percent difference (RPD) for pyrene was outside the 35% project acceptance criteria in the same MS/MSD pair at 53%. The amount of fluorene present in the parent sample was greater than four times the amount spiked and qualification was not required. Recoveries less than 30% required rejection of non-detect results. The results for benzo(a)pyrene and naphthalene in the parent sample were non-detect and qualified as rejected (R). The result for pyrene in the sample was detected and qualified as estimated with a low bias (J-) for MS/MSD percent recovery failure and RPD failure. (QC Batch 116658)
See Table 2 of this report for a summary of qualifications due to MS/MSD percent recovery and RPD failures.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

IX. Metals (6010B/6020A/7470A)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections E and G.

A. Reporting Limits

The laboratory reporting limits for metals in water matrix samples met the project required reporting limits listed in Table 2-5.21-1 of the QAPP.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exceptions:

1. Equipment blank BHWGW05RB01 (188774-013) had a detected level of calcium at 770 ug/L. The associated samples had calcium values greater than five times the blank amount, and qualification was not required.
2. Equipment blank 1065MW9BRB9A (188802-015) had a detected level of sodium at 600 ug/L. The associated samples had sodium values greater than five times the blank amount, and qualification was not required.
3. Source blank DW081706A (188837-012) had a detected level of sodium at 800 ug/L. The associated samples had sodium values greater than five times the blank amount, and qualification was not required.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for magnesium and sodium were outside the 75%-125% project acceptance criteria in QC samples BB3GW100 (188774-003) MS and/or MSD. The amounts of magnesium and sodium present in the parent sample were greater than four times the amounts spiked and qualification was not required. (QC Batch 116572)
2. The percent recoveries for mercury were outside the 75%-125% project acceptance criteria in QC samples 1349MW100 (188802-001) MS/MSD at 72%/70%. The results for total and dissolved mercury in the associated samples were qualified as estimated with a low bias (J-UJ). (QC Batch 116599)

3. The percent recoveries for calcium, magnesium, manganese and sodium were outside the 75%-125% project acceptance criteria in QC samples 1349MW100 (188802-001) MS/MSD. The amounts of these metals present in the parent sample were greater than four times the amounts spiked and qualification was not required. (QC Batch 116736)
4. The percent recovery for manganese was outside the 75%-125% project acceptance criteria in QC sample 1065PZ2A (188837-009) MS. The amount of manganese present in the parent sample was greater than four times the amount spiked and qualification was not required. (QC Batch 116738)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failure.

F. ICP Interference Check Standards

All QC criteria were met for the ICP interference check standards associated with the project samples.

G. ICP Serial Dilution

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exception:

1. The percent difference (%D) failed the 10% project acceptance criteria for calcium in the serial dilution of sample 1065PZ2A (188837-009) at 18%. The results for total and dissolved calcium in the associated samples were qualified as estimated (J/UJ). (QC Batch 116738)

See Table 2 of this report for a summary of qualifications due to serial dilution percent difference failure.

H. Initial and Continuing Calibrations

All initial and continuing calibration (CCV) standards associated with the project samples met QC acceptance criteria. Qualification was not required for samples with non-detect results associated with high-failing CCV standards. Those failures were not noted in this report.

X. Various General Chemistry Methods

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reason noted in Section E.

A. Reporting Limits

The laboratory reporting limits for the general chemistry methods analyzed met the project required reporting limits listed in the QAPP, with the following exceptions:

1. The results for nitrite-nitrogen in samples 1349MW100 (188802-001) and 610SP01 (188837-005) were reported as non-detect at two-fold and twenty-fold dilutions, respectively, due to the nature of the sample matrices. The reporting limits were raised by the dilution factors.
2. The results for fluoride and nitrate-nitrogen in sample 610SP01 (188837-005) were reported as non-detect at a ten-fold dilution due to

the nature of the sample matrix. The reporting limits were raised by the dilution factor.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exceptions:

1. Equipment blank BHWGW05RB01 (188774-013) had a detected level of alkalinity at 1.5 mg/L. The associated samples had alkalinity values greater than five times the blank amount, and qualification was not required.
2. Source blank DW082106B (188869-001) had a detected level of total dissolved solids at 50 mg/L. Qualification was not required for this physical property measurement.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples, with the following exceptions:

1. The percent recovery for fluoride was outside the 90%-100% project acceptance criteria in QC sample QC352845 LCS at 111%. The results for fluoride in the associated samples were non-detect and qualification was not required. (QC Batch 116633)
2. The percent recoveries for fluoride were outside the 90%-100% project acceptance criteria in QC samples QC353054/QC353055 LCS/LCSD at 112%/113%. The results for fluoride in the associated samples were non-detect and qualification was not required. (QC Batch 116688)

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:

1. The percent recoveries for sulfide were outside the 75%-125% project acceptance criteria in QC samples 1065PZ2A (188837-009) MS/MSD at 67%/68%. The results for sulfide in the associated samples were qualified as estimated with a low bias (J-/UJ). (QC Batch 116737)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failure.

F. Laboratory Duplicate Samples

All QC criteria were met for the laboratory duplicate samples associated with the project samples.

G. Initial and Continuing Calibrations

All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

The following paragraphs highlight the essential findings of the data validation effort of the QC split samples:

XI. Volatile Organic Compounds (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for VOCs in water matrix samples met the project required reporting limits, with the following exception:

1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane, and chloromethane. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in the trip blank associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. GC/MS Tunes

All QC criteria were met for the GC/MS tunes associated with the project samples.

H. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

- I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.
 - J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.
- XII. Total Petroleum Hydrocarbons (TPH) - Gasoline Range (8015B)**
Overall, the data are usable as reported. Qualification was not required.
- A. Reporting Limits
The laboratory reporting limit for TPH-gasoline in water matrix samples met the project-required reporting limits.
 - B. Holding Times
Technical holding time criteria were met for all project samples.
 - C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
 - D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
 - E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
 - F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
 - G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
 - H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XIII. Total Petroleum Hydrocarbons – TPH-Diesel/TPH-Fuel Oil Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for TPH-diesel and TPH-fuel oil in water matrix samples met the project-required reporting limits

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XIV. Aromatic Volatiles by GC (8021B)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section H.

A. Reporting Limits

The laboratory reporting limits for benzene, toluene, ethylbenzene, xylenes and methyl tertiary-butyl ether in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:
 - 1. Qualification was not required for samples with non-detect results associated with high-failing continuing calibration verification standards. Those failures were not noted in this report.
 - 2. The 8/30/06 at 10:57 water matrix CCV analyzed on instrument GCN had benzene with a percent difference (%D) less than the +/-15%D acceptance criteria at -18%. The result for benzene in the associated sample was non-detect and qualified as estimated (UJ).See Table 2 of this report for a summary of samples qualified for continuing calibration verification standard percent difference failure.

XV. Organochlorine Pesticides (8081A)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section C.

- A. Reporting Limits
The laboratory reporting limits for pesticides in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. The percent recovery for surrogate decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in project sample LF6GW103CL (D0601136-002) at 58%. The compounds associated with surrogate DCB: alpha-chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, endosulfan II, endosulfan sulfate, endrin, endrin ketone, gamma-chlordane, methoxychlor and toxaphene were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Performance Evaluation Mix (PEM) Check Standards

All PEM check standards met the project degradation criteria of 20% for endrin and 4,4'-DDT.

H. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

I. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XVI. Polychlorinated Biphenyls (PCBs) (8082)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections C and E.

A. Reporting Limits

The laboratory reporting limits for PCBs in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. The percent recovery for surrogate decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in project sample LF6GW103CL (D0601136-002) at 60%. The compounds associated with surrogate DCB: PCB-1248, PCB-1254 and PCB-1260 were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples, with the following exception:

1. The percent recoveries for PCB-1016 and PCB-1260 were outside the 65%-135% project acceptance criteria in QC sample PWB10821LCS at 43% and 40%, respectively. In addition, the relative percent differences (RPDs) for PCB-1016 and PCB-1260 were outside the 35% project acceptance criteria in the LCS/LCSD pair at 77% and 76%, respectively. The results for PCB-1016 and PCB-1260 in the sample were non-detect and qualified as estimated (UJ). (QC Batch PWB10821)

See Table 2 of this report for a summary of qualifications due to LCS/LCSD percent recovery and RPD failures.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XVII. Polynuclear Aromatic Hydrocarbons (PAHs) by HPLC (8310)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section C.

A. Reporting Limits

The laboratory reporting limits for PAHs in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. The percent recovery for surrogate terphenyl-d14 failed the 65%-135% project acceptance criteria in project sample LF6GW103CL (D0601136-002) at 63%. The results in this sample were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XVIII. Metals (6010B/7470A)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section C.

A. Reporting Limits

The laboratory reporting limits for metals in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. The laboratory method blank had detected levels of magnesium, silver and thallium at 177 ug/L, 3.1 ug/L and 43 ug/L, respectively. The levels of magnesium and thallium present in the associated samples were greater than five times the blank amounts or were non-detect, and qualification was not required. The results for silver in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to blank contamination.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

F. ICP Interference Check Standards

All QC criteria were met for the ICP interference check standards associated with the project samples.

G. ICP Serial Dilution

ICP serial dilutions were not analyzed with the project samples.

H. Initial and Continuing Calibrations

All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

XIX. Various General Chemistry Methods

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section B.

A. Reporting Limits

The laboratory reporting limits for the general chemistry methods analyzed met the project required reporting limits listed in the QAPP, with the following exceptions:

1. The laboratory reporting limit for fluoride was 1.0 mg/L; the project required reporting limit for this analyte was 0.1 mg/L. The laboratory reporting limit for alkalinity was 10 mg/L; the project required reporting limit for this analyte was 5 mg/L. The laboratory reporting limit for total dissolved solids was 20 mg/L; the project required reporting limit for this analyte was 10 mg/L. The laboratory reporting limit for nitrate-nitrogen was 0.1 mg/L; the project required reporting limit for this analyte was 0.05 mg/L.
2. The results for fluoride in samples LF6GW103CL (D0601136-002) and 1065MW9BCL (D0601136-003) were reported as non-detect at two-fold dilutions and the result for fluoride in sample 1213GW101CL (D0601136-004) was reported as non-detect at a fifty-fold dilution due to the nature of the sample matrices. The reporting limits were raised by the dilution factors.

B. Holding Times

Technical holding time criteria were met for all project samples, with the following exceptions:

1. Samples LF6GW103C (D0601136-002), 1065MW9BCL (D0601136-003) and 1213GW101CL (D0601136-004) were analyzed past the 48-hour analysis holding time for nitrate-nitrogen. The sample results were qualified as estimated with a low bias (J-/UJ).

See Table 2 of this report for a summary of qualifications due to missed analysis holding times.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

- F. Laboratory Duplicate Samples
All QC criteria were met for the laboratory duplicate samples associated with the project samples.
- G. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

SUMMARY

The attached Table 1 lists the samples and analyses included in the data validation effort. The attached Table 2 summarizes the data qualifications for the project samples included in the data packages.

USABILITY

The quality control criteria were reviewed, and other than those discussed above, all criteria were met and the data are considered acceptable. Rejected sample results (R) are not usable for any purpose. Estimated sample results (J/UJ) are usable only for limited purposes. Based upon the cursory data validation, all other results are considered valid and usable for all purposes.

VALIDATION QUALIFIERS IDENTIFICATION

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," October, 1999.

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. *A minus sign (-) indicates the numerical value has a low bias. A plus sign (+) indicates the numerical value has a high bias.*
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."
- NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following paragraphs highlight the essential findings of the field duplicate samples:

Field duplicate precision was evaluated by calculating the relative percent difference (RPD) between detected results in the original sample and its associated duplicate. The control limit used for field duplicates was a relative percent difference less than or equal to 50 percent, or the absolute difference of the two results must be less than the reporting limit for those analytes that were at or near the detection limit. Eight samples were collected in duplicate for the Third Quarter 2006 sampling event.

Project Sample Primary ID	Laboratory Sample ID	Project Sample Duplicate ID	Laboratory Sample ID
BB3GW100	188774-003	DUP0815061A	188774-004
1221GW104	188774-006	DUP0815063A	188774-011
BHWGW01	188774-015	DUP0815062A	188774-014
1213GW101	188802-005	DUP0816063A	188802-006
LF6GW103	188802-008	DUP0816061A	188802-010
NKGW04	188802-007	DUP0816061B	188802-011
1065MW9A	188802-013	DUP0816062A	188802-020
LF5GW104	188837-015	DUP0817062A	188837-016

The attached Table 3 summarizes the field duplicate sample results. The detected results of the original samples and the associated duplicate samples were compared and the calculated RPDs reported. All RPDs met the 50 percent precision control limit requirement, with the following exceptions:

1. In QC split duplicates BB3GW100 and DUP0815061A, the absolute difference between the results was greater than the 10 ug/L reporting limit for dissolved manganese. The original result was 24 ug/L and the duplicate result was non-detect at 10 ug/L.
2. In field duplicates 1213GW101 and DUP0816063A, the relative percent differences (RPDs) between the detected results failed the 50% acceptance criteria for ethylbenzene and TPH-gasoline at -51% and -78%, respectively.
3. In field duplicates 1065MW9A and DUP0816062A, the RPDs between the detected results failed the 50% acceptance criteria for dissolved magnesium (51%), dissolved potassium (185%), alkalinity (55%), chloride (102%) and sulfate (-127%). In addition, the absolute differences between the results were greater than the reporting limits for dissolved chromium, dissolved iron, dissolved manganese and nitrate-nitrogen. The original result for dissolved chromium was non-detect at 10 ug/L and the duplicate result was 33 ug/L. The original result for dissolved iron was 5100 ug/L and the duplicate result was non-detect at 100 ug/L. The original result for dissolved manganese was 460 ug/L and the duplicate result was non-detect at 10 ug/L. The original result for nitrate-nitrogen was non-detect at 0.05 ug/L and the duplicate result was 5.7 ug/L.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the results in the field duplicate pairs listed above may be due to the sample matrix, sampling or laboratory technique, or method defects. With the exceptions noted above, the results between the field duplicate pairs matched well. Since the effect on the quality of the data is not known, data is not qualified for field duplicate failure.

The following paragraphs highlight the essential findings of the QC split duplicate samples:

Laboratory analytical precision was evaluated by calculating the relative percent differences (RPDs) between detected results in the samples and the associated QC split duplicates, which were sent to another laboratory for analysis. The QC split samples were sent to Columbia Analytical Services in Redding, CA. The control limit used for QC split duplicates was a relative percent difference less than or equal to 50 percent, or the absolute difference of the two results must be less than the reporting limit for those analytes that were at or near the detection limit. Three samples were collected in duplicate for the Third Quarter 2006 sampling event.

Project Sample Primary ID	Laboratory Sample ID	Project Sample Split Duplicate ID	Laboratory Sample ID
LF6GW103	188802-008	LF6GW103CL	D0601136-002
1065MW9B	188802-014	1065MW9BCL	D0601136-003
1213GW101	188802-005	1213GW101CL	D0601136-004

The attached Table 4 summarizes the QC split duplicate samples. The detected results were compared and the calculated RPDs reported. All RPDs met the 50 percent precision control limit requirement, with the following exceptions:

1. In QC split duplicates 1213GW101 and 1213GW101CL, the relative percent differences (RPDs) between the reported results failed the 50% RPD acceptance criteria for ethylbenzene (109%), TPH-gasoline (93%), nitrate-nitrogen (-158%) and sulfate (-162%)
2. In QC split duplicates 1065MW9B and 1065MW9BCL, the RPDs between the reported results failed the 50% RPD acceptance criteria for chloride (84%), nitrate-nitrogen (80%) and sulfate (81%).

Data is not qualified due to RPD failure of QC split samples because the effect on the quality of the data is not known.

The following paragraphs highlight the essential findings of the field QC blank samples:

Four trip blanks, two equipment blanks and two source blanks were analyzed with the project samples. All field QC blanks were non-detect for all methods analyzed, with the following exceptions:

1. Source blank DW082106B (188869-001) had a detected level of acetone at 16 ug/L. Project sample association with this source blank could not be established, and qualification was not required.
2. Source blank DW081706A (188837-012) had a detected level of n-nitrosodimethylamine at 0.0121 ug/L. The levels of n-nitrosodimethylamine present in the project samples were non-detect, and qualification was not required.
3. Source blank DW082106B (188869-001) had a detected level of n-nitrosodimethylamine at 0.0417 ug/L. Project sample association with this blank could not be established, and qualification was not required.
4. Source blank DW081706A (188837-012) had a detected level of methyl tertiary-butyl ether at 6.8 ug/L. The detected results for methyl tertiary-butyl ether in the associated project samples were changed to non-detect (U) if those values were less than five times the blank amount.
5. Equipment blank BHWGW05RB01 (188774-013) had a detected level of calcium at 770 ug/L. The associated samples had calcium values greater than five times the blank amount, and qualification was not required.
6. Equipment blank 1065MW9BRB9A (188802-015) had a detected level of sodium at 600 ug/L. The associated samples had sodium values greater than five times the blank amount, and qualification was not required.
7. Source blank DW081706A (188837-012) had a detected level of sodium at 800 ug/L. The associated samples had sodium values greater than five times the blank amount, and qualification was not required.
8. Equipment blank BHWGW05RB01 (188774-013) had a detected level of alkalinity at 1.5 mg/L. The associated samples had alkalinity values greater than five times the blank amount, and qualification was not required.
9. Source blank DW082106B (188869-001) had a detected level of total dissolved solids at 50 mg/L. Qualification was not required for the physical property parameter total dissolved solids.

TB081606A	D0601136-005	16-Aug-06	Volatile Organic Compounds (8260B)	Trip Blank

VOCs: Volatile Organic Compounds

TPH: Total Petroleum Hydrocarbons

FO: Fuel Oil

PCBs: Polychlorinated Biphenyls

PAHs: Polynuclear Aromatic Hydrocarbons

BTEX: Benzene, Toluene, Ethylbenzene, Xylenes

MTBE: Methyl tertiary-butyl ether

NDMA: N-Nitrosodimethylamine

FD: Field duplicate of previous numbered sample, (1), (2), etc.

QC: QC split duplicate of previous numbered sample, (1), (2), etc.

General Chemistry Parameters

- (1) Total Dissolved Solids (160.1)
- (2) Alkalinity (310.1)
- (3) Anions (300.0)
- (4) Fluoride (340.2)
- (5) Nitrate-N (353.2)
- (6) Nitrate/Nitrite-N (353.2)
- (7) Hardness (SM 2340B)
- (8) Cyanide (335.2)
- (9) Surfactants (425.1)
- (10) Oil & Grease (1664A)
- (11) Phenolics (420.1)
- (12) Sulfide (376.2)
- (13) Total Organic Carbon (415.2)
- (14) pH (SW9040B)
- (15) Nitrite-N (354.1)

QC SPLIT SAMPLE LABORATORY: Columbia Analytical Services, Inc., Redding, CA

SAMPLING DATES: December 5, 6 and 7, 2006

Data validation of Level III laboratory data packages was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan, April, 2001; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Organic Data Review, October, 1999; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, June, 2001; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004.

The data were reviewed for holding times, surrogate recoveries, laboratory blanks, laboratory control samples, laboratory duplicate samples, matrix spikes and matrix spike duplicates, GC/MS tunes, performance evaluation mix standards, ICP interference check standards, ICP serial dilutions, initial calibrations, continuing calibration verification standards, internal standards and field QC samples.

The following paragraphs highlight the essential findings of the data validation effort:

I. Volatile Organic Compounds (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for VOCs in water matrix samples met the project required reporting limits, with the following exception:

1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane, and chloromethane. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples with high-failing surrogate recoveries and non-detected results did not require qualification, and were not noted in this report.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exceptions:

1. Trip blank TB1206061A (191314-013) had a detected level of chloroform at 7.7 ug/L. The levels of chloroform in the associated project samples were non-detect, and qualification was not required.
2. Trip blank TB1207061A (191358-012) had detected levels of acetone (22 ug/L) and methylene chloride (5.4 ug/L). The levels of acetone and methylene chloride in the associated project samples were non-detect, and qualification was not required.
3. Trip blank TB1207061B (191358-014) had a detected level of chloroform at 0.5 ug/L. The levels of chloroform in the associated project samples were non-detect, and qualification was not required.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

G. GC/MS Tunes

All QC criteria were met for the GC/MS tunes associated with the project samples.

H. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

I. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

J. Internal Standards

Internal standard areas and retention times met QC acceptance criteria for all project samples.

II. Total Petroleum Hydrocarbons (TPH) - Gasoline Range/Stoddard Solvent (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limit for TPH-gasoline in water matrix samples met the project required reporting limit. A project required reporting limit was not provided for Stoddard solvent in the project QAPP.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

III. Total Petroleum Hydrocarbons (TPH) – Diesel/Fuel Oil Range (8015B)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section F.

A. Reporting Limits

The laboratory reporting limits for TPH-diesel and TPH-fuel oil in water matrix samples met the project-required reporting limits, with the following exception:

1. The results for TPH-diesel and TPH-fuel oil in samples 1065PZ2A (191314-011) and 1065PZ4A (191314-012) were reported as non-detect at two-fold dilutions due to limited sample volume.

- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:
 - 1. The percent recoveries for TPH-diesel were outside the 65%-135% project acceptance criteria in QC samples LF10SP01 (191314-003) MS/MSD at 30%/19%. The detected result for TPH-diesel in the parent sample qualified as estimated with a low bias (J-). (QC Batch 120405)
See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failure.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

IV. Aromatic Volatiles by GC (8021B)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for benzene, toluene, ethylbenzene, xylenes and methyl tertiary-butyl ether in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.

- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

V. Organochlorine Pesticides (8081A)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections C, H and I.

- A. Reporting Limits
The laboratory reporting limits for pesticides in water matrix samples met the project-required reporting limits, with the following exception:
 - 1. The results for various pesticides in sample 1349MW100 (191286-013) were reported as non-detect at a two-fold or five-fold dilution. The reporting limits were raised by the dilution factors.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:
 - 1. The percent recoveries for surrogates 2,4,5,6-tetrachloro-meta-xylene (TCMX) and/or decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in several project samples. The compounds associated with surrogate TCMX (alpha-BHC, beta-BHC, delta-BHC, gamma-BHC, aldrin, heptachlor, heptachlor epoxide and endosulfan I);

and the compounds associated with surrogate DCB (alpha-chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, endosulfan II, endosulfan sulfate, endrin, endrin ketone, gamma-chlordane, methoxychlor and toxaphene) were qualified as estimated with a low bias (J/UJ). The following table lists the project samples that were qualified due to these QC failures.

Project Sample Name	Laboratory Sample ID	DCB % Recovery	TCMX % Recovery
BB1PZ100	191286-007	51%	75% (pass)
BB1PZ101	191286-008	61%	76% (pass)
1349MW100	191286-013	67% (pass)	63%
DW120606B	191290-001	70% (pass)	49%

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failure.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Performance Evaluation Mix (PEM) Check Standards

All PEM check standards met the project degradation criteria of 20% for endrin and 4,4'-DDT.

H. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples, with the following exception:

1. The 12/6/06 initial calibration analyzed on instrument GC23, channel A, had one compound with a percent relative standard deviation (%RSD) greater than 20%: methoxychlor at 26%. The results for methoxychlor in the associated samples were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to initial calibration percent relative standard deviation failure.

I. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. Data was reported from two columns. Continuing calibration verification (CCV) standards with percent differences (%Ds) that failed criteria on one column did not require qualification of sample results if those results were reported from the column in control. Such failures were not noted in this report.
2. Qualification was not required for samples with non-detect results associated with high-failing CCV standards. Those failures were not noted in this report.
3. The 12/8/06 at 8:31 water matrix CCV analyzed on instrument GC23, channel A, had two compounds with %Ds less than the +/-15%D acceptance criteria: beta-BHC (-18%) and endosulfan II (-16%). The results for beta-BHC and endosulfan II in the associated samples were non-detect and qualified as estimated (UJ).
4. The 12/15/06 at 4:40 water matrix CCV analyzed on instrument GC23, channel A, had one compound with a %D less than the +/-15%D acceptance criteria: 4,4'-DDT (-25%). The results for 4,4'-DDT in the associated samples were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of samples qualified for continuing calibration verification standard percent difference failure.

VI. Polychlorinated Biphenyls (PCBs) (8082)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for PCBs in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples. Data was reported from two columns. Continuing calibration verification (CCV) standards with percent differences (%Ds) that failed criteria on one column did not require qualification of sample results if those results were reported from the column in control. Such failures were not noted in this report.

VII. Polynuclear Aromatic Hydrocarbons (PAHs) by HPLC (8310)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section F.

- A. Reporting Limits
The laboratory reporting limits for PAHs in water matrix samples met the project required reporting limits, with the following exceptions:
 - 1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.12-1 of the QAPP for anthracene and fluoranthene. The laboratory reported 0.5 ug/L for anthracene and 0.4 ug/L for fluoranthene. The project required reporting limit for each of these compounds was 0.2 ug/L.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:

1. The percent recoveries for benzo(a)pyrene were outside the 65%-135% project acceptance criteria in QC samples 514AGW101 (191314-019) MS/MSD at 29%/38%. The result for benzo(a)pyrene in the parent sample was non-detect and qualified as estimated (UJ). (QC Batch 120180)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failure.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

VIII. Total and Dissolved Metals (6020A/7470A)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section G.

A. Reporting Limits

The laboratory reporting limits for metals in water matrix samples met the project required reporting limits listed in Table 2-5.21-1 of the QAPP.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any field QC blanks associated with the project samples. Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Method blank QC367719 had a detected level of lead at 15 ug/L. The associated samples were either non-detect for lead, or had lead values greater than five times the blank amount, and qualification was not required.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for magnesium and sodium were outside the 75%-125% project acceptance criteria in QC samples 1213GW101 (191286-012) MS and/or MSD. The amounts of magnesium and sodium present in the parent sample were greater than four times the amounts spiked and qualification was not required. (QC Batch 120218)
2. The percent recoveries for manganese and sodium were outside the 75%-125% project acceptance criteria in QC samples 11065PZ2A (191314-011) MS and/or MSD. The amounts of manganese and sodium present in the parent sample were greater than four times the amounts spiked and qualification was not required. (QC Batch 120323)
3. The percent recoveries for calcium and manganese were outside the 75%-125% project acceptance criteria in QC sample LF10SP01 (191314-003) MS. The amounts of calcium and manganese present in the parent sample were nearly four times the amounts spiked and qualification was not required. (QC Batch 120324)

F. ICP Interference Check Standards

All QC criteria were met for the ICP interference check standards associated with the project samples.

G. ICP Serial Dilution

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. The percent difference (%D) failed the 10% project acceptance criteria for potassium in the serial dilution of sample 1213GW101 (191286-012) at 48%. The results for total and dissolved potassium in the associated samples were qualified as estimated (J/UJ). (QC Batch 120218)
2. The %Ds failed the 10% project acceptance criteria for calcium and sodium in the serial dilution of sample LF10SP01 (191314-003) at 12% for both metals. The results for total calcium and sodium in the associated sample were qualified as estimated (J/UJ). (QC Batch 120323)
3. The %D failed the 10% project acceptance criteria for sodium in the serial dilution of sample LF10SP01 (191314-003) at 12%. The results for dissolved sodium in the associated samples were qualified as estimated (J/UJ). (QC Batch 120324)

See Table 2 of this report for a summary of qualifications due to serial dilution percent difference failure.

H. Initial and Continuing Calibrations

All initial and continuing calibration verification (CCV) standards associated with the project samples met QC acceptance criteria. Qualification was not required for samples with non-detect results associated with high-failing CCV standards. Those failures were not noted in this report.

IX. Various General Chemistry Methods

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections B, D and E.

A. Reporting Limits

The laboratory reporting limits for the general chemistry methods analyzed met the project required reporting limits listed in the QAPP, with the following exception:

1. The results for nitrite-nitrogen in samples 1213GW101 (191286-012), 1349MW100 (191286-013) and LF4GW103 (191286-014) were reported as non-detect at two-fold dilutions due to the nature of the sample matrices. The reporting limits were raised by the dilution factors.

B. Holding Times

Technical holding time criteria were met for all project samples, with the following exception:

1. Samples LF10GW02 (191314-001), LF10SP01 (191314-003), BB3GW100 (191314-006), 1065MW101 (191314-009), 1065MW102 (191314-010), 1065PZ2A (191314-011), 1065PZ4A (191314-012), LF6GW104 (191314-014), LF6GW105 (191314-015) and LF6GW106 (191314-016) were analyzed five days past the seven-day analysis holding time for total dissolved solids. The sample results were detected and qualified as estimated with a low bias (J-).

See Table 2 of this report for a summary of qualifications due to missed analysis holding times.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples, with the following exceptions:

1. Source blank DW120606B (191290-001) had a detected level of total dissolved solids at 30 mg/L. Project sample association with this source blank could not be established, and qualification was not required.
2. Equipment blank BHWGW04RBHWGW100 (191358-006) had a detected level of alkalinity at 1.1 mg/L. The associated samples had alkalinity values greater than five times the blank amount, and qualification was not required.

D. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples, with the following exception:

1. The percent recovery for total dissolved solids was outside the 80%-120% project acceptance criteria in QC sample QC368049 LCSD (laboratory control sample duplicate) at 122%. The detected results for

total dissolved solids in the associated samples were qualified as estimated with a high bias (J+). (QC Batch 120302)

See Table 2 of this report for a summary of qualifications due to laboratory control sample percent recovery failure.

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:

1. The percent recoveries for sulfide were outside the 75%-125% project acceptance criteria in QC samples 1065PZ2A (191314-011) MS/MSD at 58%/59%. The results for sulfide in the associated samples were non-detect and qualified as estimated (UJ). (QC Batch 120322)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failure.

F. Laboratory Duplicate Samples

All QC criteria were met for the laboratory duplicate samples associated with the project samples.

G. Initial and Continuing Calibrations

All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

The following paragraphs highlight the essential findings of the data validation effort of the QC split samples:

X. **Volatile Organic Compounds (VOCs) by GC/MS (8260B)**

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

The laboratory reporting limits for VOCs in water matrix samples met the project required reporting limits, with the following exceptions:

1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane, and chloromethane. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any field QC blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.
- H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.
- J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

XI. Total Petroleum Hydrocarbons (TPH) - Gasoline Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limit for TPH-gasoline in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XII. Total Petroleum Hydrocarbons (TPH) – Diesel/Fuel Oil Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for TPH-diesel and TPH-fuel oil in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XIII. Aromatic Volatiles by GC (8021B)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section H.

A. Reporting Limits

The laboratory reporting limits for benzene, toluene, ethylbenzene, xylenes and methyl tertiary-butyl ether in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exception:

1. The 12/12/06 at 11:00 water matrix continuing calibration verification (CCV) standard analyzed on instrument GCN had methyl tertiary-butyl ether with a percent difference (%D) less than the +/-15%D acceptance criteria at -17%. The result for methyl tertiary-butyl ether in the associated sample was non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of samples qualified for continuing calibration verification standard percent difference failure.

XIV. Organochlorine Pesticides (8081A)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for pesticides in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Performance Evaluation Mix (PEM) Check Standards
All PEM check standards met the project degradation criteria of 20% for endrin and 4,4'-DDT.
- H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples. Qualification was not required for samples with non-detect results associated with high-failing continuing calibration verification (CCV) standards. Those failures were not noted in this report.

XV. Polychlorinated Biphenyls (PCBs) (8082)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section C.

A. Reporting Limits

The laboratory reporting limits for PCBs in water matrix samples met the project-required reporting limits.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. The percent recovery for surrogate decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in project sample LF6GW103CL (D0601981-001) at 57%. The compounds associated with surrogate DCB: PCB-1248, PCB-1254 and PCB-1260 were non-detect and qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate

A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XVI. Polynuclear Aromatic Hydrocarbons (PAHs) by HPLC (8310)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for PAHs in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.
- D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
- E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.
- G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.
- H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

XVII. Dissolved Metals (6010B/6020/7470A)

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for metals in water matrix samples met the project-required reporting limits.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

- D. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.
- E. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- F. ICP Interference Check Standards
All QC criteria were met for the ICP interference check standards associated with the project samples.
- G. ICP Serial Dilution
All QC criteria were met for the ICP serial dilutions associated with the project samples.
- H. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

XVIII. Various General Chemistry Methods

Overall, the data are usable as reported. Qualification was not required.

- A. Reporting Limits
The laboratory reporting limits for the general chemistry methods analyzed met the project required reporting limits listed in the QAPP, with the following exception:
 - 1. The laboratory reporting limit for alkalinity was 10 mg/L; the project required reporting limit for this analyte was 5 mg/L. The laboratory reporting limit for fluoride was 1.0 mg/L; the project required reporting limit for this analyte was 0.1 mg/L. The laboratory reporting limit for nitrate-nitrogen and nitrite-nitrogen was 0.1 mg/L; the project required reporting limit for these analytes was 0.05 mg/L. The laboratory reporting limit for total dissolved solids was 20 mg/L; the project required reporting limit for this analyte was 10 mg/L.
- B. Holding Times
Technical holding time criteria were met for all project samples.
- C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.
- D. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

- E. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.
- F. Laboratory Duplicate Samples
All QC criteria were met for the laboratory duplicate samples associated with the project samples.
- G. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

FIELD DUPLICATE SAMPLES

Field duplicate precision was evaluated by calculating the relative percent difference (RPD) between detected results in the original sample and its associated duplicate. The control limit used for field duplicates was a relative percent difference less than or equal to 50 percent, or the absolute difference of the two results must be less than the reporting limit for those analytes that were at or near the detection limit. Six samples were collected in duplicate for the Fourth Quarter 2006 sampling event.

Project Sample Primary ID	Laboratory Sample ID	Project Sample Duplicate ID	Laboratory Sample ID
LF6GW103	191286-001	DUP1205062A	191286-004
1065MW9A	191286-002	DUP1205062C	191286-005
231GW09	191286-003	DUP1205062B	191286-006
1065PZ1B	191286-010	DUP1205061A	191286-011
1221GW104	191314-004	DUP-1206063A	191314-005
BHWGW04	191358-001	DUP1207062A	191358-007

The attached Table 3 summarizes the field duplicate sample results. The detected results of the original samples and the associated duplicate samples were compared and the calculated RPDs reported. All RPDs met the 50 percent precision control limit requirement.

QC SPLIT DUPLICATE SAMPLES

Laboratory analytical precision was evaluated by calculating the relative percent differences (RPDs) between detected results in the samples and the associated QC split duplicates, which were sent to another laboratory for analysis. The QC split samples were sent to Columbia Analytical Services in Redding, CA. The control limit used for QC split duplicates was a relative percent difference less than or equal to 50 percent, or the absolute difference of the two results must be less than the reporting limit for those analytes that were at or near the detection limit. Four samples were collected in duplicate for the Fourth Quarter 2006 sampling event.

Project Sample Primary ID	Laboratory Sample ID	Project Sample Split Duplicate ID	Laboratory Sample ID
LF6GW103	191286-001	LF6GW103CL	D0601981-001
1065MW9A	191286-002	1065MW9ACL	D0601981-003
231GW09	191286-003	231GW09CL	D0601981-002
1065PZ1B	191286-010	1065PZ1BCL	D0601981-004

The attached Table 4 summarizes the QC split duplicate samples. The detected results were compared and the calculated RPDs reported. All RPDs met the 50 percent precision control limit requirement, with the following exception:

1. In QC split duplicates 1065MW9A and 1065MW9A CL, the relative percent difference (RPD) between the reported results failed the 50% RPD acceptance criteria for arsenic at 51%.

Data is not qualified due to RPD failure of QC split samples because the effect on the quality of the data is not known.

FIELD QC BLANKS

Four trip blanks, two equipment blanks and one source blank were analyzed with the project samples. All field QC blanks were non-detect for all methods analyzed, with the following exceptions:

1. Trip blank TB1206061A (191314-013) had a detected level of chloroform at 7.7 ug/L. The levels of chloroform in the associated project samples were non-detect, and qualification was not required.
2. Trip blank TB1207061A (191358-012) had detected levels of acetone (22 ug/L) and methylene chloride (5.4 ug/L). The levels of acetone and methylene chloride in the associated project samples were non-detect, and qualification was not required.
3. Trip blank TB1207061B (191358-014) had a detected level of chloroform at 0.5 ug/L. The levels of chloroform in the associated project samples were non-detect, and qualification was not required.
4. Source blank DW120606B (191290-001) had a detected level of total dissolved solids at 30 mg/L. Project sample association with this source blank could not be established, and qualification was not required.
5. Equipment blank BHWGW04RBHWGW100 (191358-006) had a detected level of alkalinity at 1.1 mg/L. The associated samples had alkalinity values greater than five times the blank amount, and qualification was not required.

SUMMARY

The attached Table 1 lists the samples and analyses included in the data validation effort. The attached Table 2 summarizes the data qualifications for the project samples included in the data packages.

USABILITY

The quality control criteria were reviewed, and other than those discussed above, all criteria were met and the data are considered acceptable. Estimated sample results (J/UJ) are usable only for limited purposes. Based upon the cursory data validation, all other results are considered valid and usable for all purposes.

VALIDATION QUALIFIERS IDENTIFICATION

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," October, 1999.

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. *A minus sign (-) indicates the numerical value has a low bias. A plus sign (+) indicates the numerical value has a high bias.*
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."
- NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

CASE NARRATIVE

Laboratory number: 188774
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio of San Francisco
Request Date: 08/16/06
Samples Received: 08/16/06

This hardcopy data package contains sample and QC results for nineteen water samples, requested for the above referenced project on 08/16/06. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

Low response was observed for bromomethane in the CCV analyzed 08/16/06 13:34; this analyte met minimum response criteria. No other analytical problems were encountered.

Pesticides (EPA 8081A):

Low responses were observed for 4,4'-DDT and methoxychlor in the ICV analyzed 08/21/06 22:31; average ICV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for many analytes in the CCV analyzed 08/23/06 15:44. High response was observed for endrin; average CCV drift met method requirements. High responses were observed for many analytes in the CCV analyzed 08/24/06 10:16; average CCV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. High response was observed for endrin in the CCV analyzed 08/23/06 10:28; average CCV drift met method requirements. Low recoveries were observed for 4,4'-DDT and endrin in the MS/MSD of 1349MW100 (lab # 188802-001); the LCS was within limits, and the associated RPDs were within limits. High recoveries were observed for dieldrin; the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. Low surrogate recoveries were observed for decachlorobiphenyl in BB1PZ101 (lab # 188774-002) and the MS of 1349MW100 (lab # 188802-001); the corresponding TCMX surrogate recoveries were within limits. No other analytical problems were encountered.

Polynuclear Aromatics by HPLC (EPA 8310):

Low recoveries were observed for benzo(a)pyrene, naphthalene, and pyrene in the MS/MSD of 1349MW100 (lab # 188802-001); the LCS was within limits. High recovery was observed for pyrene in the MSD of 1349MW100 (lab # 188802-001); the LCS was within limits, and this analyte was not detected at or above the RL in the associated samples. High RPD was also observed for pyrene in the

CASE NARRATIVE

Laboratory number: 188774
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio of San Francisco
Request Date: 08/16/06
Samples Received: 08/16/06

Polynuclear Aromatics by HPLC (EPA 8310):

MS/MSD of 1349MW100 (lab # 188802-001); this analyte was not detected at or above the RL in the associated samples. Response exceeding the instrument's linear range was observed for fluorene in the MS of 1349MW100 (lab # 188802-001). High surrogate recoveries were observed for 1-methylnaphthalene (UV) in the MS/MSD of 1349MW100 (lab # 188802-001). High surrogate recovery was observed for 1-methylnaphthalene (F) in the MSD of 1349MW100 (lab # 188802-001). No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A) Water:

Low recoveries were observed for mercury in the MS/MSD of 1349MW100 (lab # 188802-001); the BS/BSD were within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A) Filtrate:

No analytical problems were encountered.

Ion Chromatography (EPA 300.0):

No analytical problems were encountered.

Alkalinity (EPA 310.1):

No analytical problems were encountered.

Sulfide (EPA 376.2):

No analytical problems were encountered.

Total Dissolved Solids (TDS) (EPA 160.1):

No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 188774 Date Received: 8-16-06 Number of Coolers: 3
Client: Tetra Tech Project: 2893.04.51

A. Preliminary Examination Phase

Date Opened: 8-16-06 By (print): Tray Windsor (sign) [Signature]

1. Did cooler come with a shipping slip (airbill, etc.)?..... YES ☒ NO ☐

If YES, enter carrier name and airbill number: _____

2. Were custody seals on outside of cooler?..... YES ☒ NO ☐

How many and where? 1 per cooler Seal date: 8/16/06 Seal name: Illegible (see below)

3. Were custody seals unbroken and intact at the date and time of arrival?..... YES ☒ NO ☐

4. Were custody papers dry and intact when received?..... YES ☒ NO ☐

5. Were custody papers filled out properly (ink, signed, etc.)?..... YES ☒ NO ☐

6. Did you sign the custody papers in the appropriate place?..... YES ☒ NO ☐

7. Was project identifiable from custody papers?..... YES ☒ NO ☐

If YES, enter project name at the top of this form.

8. If required, was sufficient ice used? Samples should be 2-6 degrees C. YES ☒ NO ☐

Type of ice: Wet Temperature: Cold - no temp blanks

B. Login Phase

Date Logged In: 8-16-06 By (print): Tray Windsor (sign) [Signature]

1. Describe type of packing in cooler: In ziploc type bags

2. Did all bottles arrive unbroken?..... YES ☒ NO ☐

3. Were labels in good condition and complete (ID, date, time, signature, etc.)?..... YES ☒ NO ☒

4. Did bottle labels agree with custody papers?..... YES ☒ NO ☐

5. Were appropriate containers used for the tests indicated?..... YES ☒ NO ☐

6. Were correct preservatives added to samples?..... YES ☒ NO ☐

7. Was sufficient amount of sample sent for tests indicated?..... YES ☒ NO ☐

8. Were bubbles absent in VOA samples? If NO, list sample IDs below..... YES ☒ NO ☐

9. Was the client contacted concerning this sample delivery?..... YES ☐ NO ☒

If YES, give details below.

Who was called? _____ By whom? _____ Date: _____

* Additional Comments:

* B3 - sample - old one bottle arrived w/out a label on it. ID'd by process of elimination.

0.5 mL of TEH_SURR was added to all samples

0.5 mL of TEH_SP was added to all spikes

pH of all samples adjusted to pH ≤ 2 with H₂SO₄

☒ Samples were continually extracted about 450 mL of CH₂Cl₂

Extraction Start Time: 1700

Extraction End Time: 1155

☐ Samples were extracted 3 times with 60 mL of CH₂Cl₂

Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄

Concentrated to volumes as noted above

Sample Preparation Summary

22-AUG-2006 13:02

Batch Number : 116604
 Date Extracted : 21-AUG-2006
 Extracted by : Jessie O'Brien Mee
 Prep Method : 3520C

Analysis : 8081
 Bgrndp : N/A
 Units : mL
 Clean-up :

Spike #1 ID : S4064A
 Spike #2 ID : S4098A
 Spike #3 ID :
 SOP Version : 8081w_rv14

TCLP Fluid # 1 USED FOR ORGANICS EXTRACTION

3.5 mL of 1 N HCl was added to all samples

Used Sodium Hydroxide (NaOH)

Used Acetic acid (HOAc)

Temperature Limits: 21 - 25 C

Fluid #1 pH Limits: 4.88 - 4.98 su

Fluid #2 pH Limits: 2.83 - 3.03 su

Extract filtered through 0.7um x 142mm TCLP filter paper

Calibration Table

NEW ICAL FOLLOWING REPLACEMENT OF UV LAMP. *gm*
HPLC04 METHOD 8310 *22 MAY 2006*

Calib. Data Modified : 5/22/2006 4:16:03 PM

Calculate : External Standard
Based on : Peak Area

Rel. Reference Window : 1.000 %

Abs. Reference Window : 0.200 min

Rel. Non-ref. Window : 1.000 %

Abs. Non-ref. Window : 0.250 min

Do not use Multiplier & Dilution Factor with ISTDs

Uncalibrated Peaks : not reported

Partial Calibration : Yes, identified peaks are recalibrated

Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear

Origin : Ignored

Weight : Equal

Recalibration Settings:

Average Response : Average all calibrations

Average Retention Time: Floating Average New 75%

Calibration Report Options :

Printout of recalibrations within a sequence:

Calibration Table after Recalibration

Normal Report after Recalibration

If the sequence is done with bracketing:

Sample Preparation Summary

23-AUG-2006 17:56

Batch Number : 116658
Date Extracted : 22-AUG-2006
Extracted by : Jessie O'Brien Mee
Prep Method : 3520C

Analysis : 8310
Bg group : N/A
Units : mL
Clean-up :

Spike #1 ID : S4149D
Spike #2 ID : S3553B
Spike #3 ID :
SDP Version : 8310w_rv6

Cleanup Method (if needed):

☐ EPA 3640a GPC

☐ EPA 3630c Silica Gel

[illegible]

Mfg & Lot# / LIMS # / Time	Date / Initials
0.1 mL of surrogate solution was added to all samples	S449D / G* JCM 8/22/06
1.0 mL of matrix spiking solution was added to all spikes	S3553B
☒ Samples continuously extracted with about 450 mL of CH ₂ Cl ₂	EM46131
Extraction Start Time:	1420 JCM 8/22/06 1620
Extraction End Time:	1025 JCM 8/23/06
☐ Samples were extracted 3 times with 60 mL of CH ₂ Cl ₂	n/A PDM 8/23/06
Extracts filtered through baked, CH ₂ Cl ₂ -rinsed ^{accumulated} powdered Na ₂ SO ₄	EM46111620
Exchanged 2x with Acetonitrile	EM46059
Concentrated: ☐ to volumes as noted above ☐ to clean-up volume	✓
Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel	n/A
Extracts filtered with 0.45 um PTFE syringe filter	whatman K774

Tuning Parameters

===Plasma Condition===

RF Power: 1300 W
RF Matching: 1.7 V
Smpl Depth: 8 mm
Torch-H: 0.2 mm
Torch-V: -0.2 mm
Carrier Gas: 1.07 L/min
Makeup Gas: 0 L/min
Optional Gas: --- %
PeriPump1: 0.1 rps
PeriPump2: --- rps
S/C Temp: 2 degC

===Ion Lenses===

Extract 1: -110 V
Extract 2: -100 V
Einzel 1,3: -120 V
Einzel 2: 7 V
Omega Bias: -95 V
Omega (+): 5 V
Omega (-): -5 V
QP Focus: 9 V
Plate Bias: -5 V

===Q-Pole Parameters===

AMU Gain: 130
AMU Offset: 126
Axis Gain: 0.9993
Axis Offset: -0.1
QP Bias: 1.6 V

===Detector Parameters===

Discriminator: 8.8 mV
Analog HV: 1860 V
Pulse HV: 1590 V

LIMITED VOLUME SAMPLES (results should be regarded as estimated and 'J-flagged' if < 2mL titrant used)

P: Phenolphthalein Alkalinity (using volume to pH 8.3)

T-P: Total Alkalinity minus Phenolphthalein Alkalinity

Carbonate Alkalinity = 2x the smaller of P or (T-P)

Bicarbonate Alkalinity = (T-2P) when P < (T-P)

Hydroxide Alkalinity = (2P-T) when (T-P) < P

CASE NARRATIVE

Laboratory number: 188802
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio
Request Date: 08/17/06
Samples Received: 08/17/06

This hardcopy data package contains sample and QC results for twenty water samples, requested for the above referenced project on 08/17/06. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

The requested matrix spikes were not reported for 1349MW100 (lab # 188802-001) because part of the matrix spike sample was lost during the extraction process. Insufficient sample remained to re-extract the matrix spikes. The LCS was within limits. No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

High response was observed for vinyl acetate in the CCV analyzed 08/21/06 08:45; this analyte was not detected at or above the RL in the associated sample. No other analytical problems were encountered.

Pesticides (EPA 8081A):

Low responses were observed for many analytes in the ICV analyzed 08/21/06 22:31 and the ICV analyzed 08/28/06 14:47; average ICV drift met method requirements. High responses were observed for many analytes in the CCV analyzed 08/23/06 10:28, the CCV analyzed 08/24/06 10:16, and the CCV analyzed 08/24/06 18:44; average CCV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for many analytes in the CCV analyzed 08/23/06 15:44 and the CCV analyzed 08/29/06 12:41. High response was observed for endrin in the CCV analyzed 08/23/06 15:44; average CCV drift met method requirements. Low recoveries were observed for 4,4'-DDT and endrin in the MS/MSD of 1349MW100 (lab # 188802-001); the LCS was within limits, and the associated RPDs were within limits. High recoveries were observed for dieldrin; the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. Low surrogate recoveries were observed for decachlorobiphenyl and TCMX in sample 1349MW100 (188802-001). The sample was re-extracted 2 days past the EPA recommended hold time (188802-021, 1349MW100 RE); affected data was qualified with "b". Low surrogate recoveries for decachlorobiphenyl and TCMX in the re-extract confirmed matrix interference. No other analytical problems were encountered.

Polychlorinated Biphenyls (PCBs) (EPA 8082):

Low surrogate recoveries were observed for decachlorobiphenyl and TCMX in

CASE NARRATIVE

Laboratory number: 188802
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio
Request Date: 08/17/06
Samples Received: 08/17/06

Polychlorinated Biphenyls (PCBs) (EPA 8082):

sample 1349MW100 (188802-001). The sample was re-extracted 2 days past the EPA recommended hold time (188802-021, 1349MW100 RE); affected data was qualified with "b". Low surrogate recoveries for decachlorobiphenyl and TCMX in the re-extract confirmed matrix interference. No other analytical problems were encountered.

Polynuclear Aromatics by HPLC (EPA 8310):

Low recoveries were observed for benzo(a)pyrene, naphthalene, and pyrene in the MS/MSD of 1349MW100 (lab # 188802-001); the LCS was within limits. High recovery was observed for pyrene in the MSD of 1349MW100 (lab # 188802-001); the LCS was within limits. High RPD was also observed for pyrene in the MS/MSD of 1349MW100 (lab # 188802-001). Response exceeding the instrument's linear range was observed for fluorene in the MS of 1349MW100 (lab # 188802-001). High surrogate recoveries were observed for 1-methylnaphthalene (UV) in 1349MW100 (lab # 188802-001) and the MS/MSD of 1349MW100 (lab # 188802-001), due to matrix interference. High surrogate recovery was observed for 1-methylnaphthalene (F) in the MSD of 1349MW100 (lab # 188802-001), due to matrix interference. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A):

High responses were observed for magnesium in the CCV analyzed 08/25/06 02:09 and the CCV analyzed 08/25/06 03:28; this analyte was not detected at or above the RL in the associated sample. Low recoveries were observed for mercury in the MS/MSD of 1349MW100 (lab # 188802-001); the associated RPD was within limits. Responses exceeding the instrument's linear range were observed for many analytes in the MS/MSD of 1349MW100 (lab # 188802-001). No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):

No analytical problems were encountered.

Alkalinity (EPA 310.1):

No analytical problems were encountered.

Sulfide (EPA 376.2):

No analytical problems were encountered.

Total Dissolved Solids (TDS) (EPA 160.1):

No analytical problems were encountered.

Notes: 1 - Use EPA 3630A Silica Gel Cleanup Step. 2 - General Chemistry (Total Alkalinity, Bicarbonate, Carbonate, Chloride, Fluoride, Nitrate, Nitrite, and Sulfate) 3 - Indicate in the metals column (by number) which metals list is requested. Metals Lists (23 - Al, Sb, As, Ba, Be, Cr, Cd, Cu, Fe, Pb, Mg, Mn, Ni, K, Ag, Na, Se, Ti, V, and Zn) Metals List Cont. (22 - Al, Sb, As, Ba, Be, Cr, Cd, Cu, Fe, Pb, Mg, Mn, Ni, K, Ag, Na, Se, Ti, V, and Zn) (13 - As, Ca, Cr, Cd, Cu, Fe, K, Mg, Mn, Na, Ni, Pb, and Zn) Metals List Cont. (7 - As, Cr, Cd, Cu, Pb, Ni, and Zn) (3 - Al, Fe, and Cr) (Other -)

COOLER RECEIPT CHECKLIST

Login#: 188802 Date Received: 8-17-06 Number of Coolers: 6
Client: Treadwell & Rollo Project: 2893.04.51

A. Preliminary Examination Phase

Date Opened: 8-17-06 By (print): Tray Windsor (sign) [Signature]

1. Did cooler come with a shipping slip (airbill, etc.)?..... YES ☒ NO

If YES, enter carrier name and airbill number: _____

2. Were custody seals on outside of cooler?..... ☒ YES NO

How many and where? 1 per over cooler Seal date: 8/17/06 Seal name: Illegible (see below)

3. Were custody seals unbroken and intact at the date and time of arrival?..... ☒ YES NO

4. Were custody papers dry and intact when received?..... ☒ YES NO

5. Were custody papers filled out properly (ink, signed, etc.)?..... ☒ YES NO

6. Did you sign the custody papers in the appropriate place?..... ☒ YES NO

7. Was project identifiable from custody papers?..... ☒ YES NO

If YES, enter project name at the top of this form.

8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ☒ YES NO

Type of ice: wet Temperature: 5.2 cold 5.6 4.0 5.7 3.4

(temp blank)

B. Login Phase

Date Logged In: 8-17-06 By (print): Tray Windsor (sign) [Signature]

1. Describe type of packing in cooler: in ziploc type bags

2. Did all bottles arrive unbroken?..... ☒ YES NO

3. Were labels in good condition and complete (ID, date, time, signature, etc.)?... ☒ YES NO

4. Did bottle labels agree with custody papers?..... ☒ YES NO

5. Were appropriate containers used for the tests indicated?..... ☒ YES NO

6. Were correct preservatives added to samples?..... ☒ YES NO

7. Was sufficient amount of sample sent for tests indicated?..... ☒ YES NO

8. Were bubbles absent in VOA samples? If NO, list sample IDs below..... YES ☒ NO

9. Was the client contacted concerning this sample delivery?..... YES NO

If YES, give details below.

Who was called? _____ By whom? _____ Date: _____

Additional Comments:

B8- Sample -001 17 of the 18 vials have air
bubbles of considerable size.

0.5 mL of TEH_SURR was added to all samples

0.5 mL of TEH_SP was added to all spikes

pH of all samples adjusted to pH ≤ 2 with H₂SO₄☒ Samples were continually extracted about 450 mL of CH₂Cl₂

Extraction Start Time:

Extraction End Time:

☐ Samples were extracted 3 times with 60 mL of CH₂Cl₂Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄

Concentrated to volumes as noted above

- ☐ Extracts were cleaned up using C&T assembled g columns
- ☒ Extracts were cleaned up using 1.0 g cartridges
- Extracts were eluted with 40 mL CH_2Cl_2
- Concentrated to volumes as noted above

QC Flag Legend

- a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
- A - Target compound detected but, quantitated amount
exceeded maximum amount.
- M - Compound response manually integrated.

TCLP Fluid # 1 USED FOR ORGANICS EXTRACTION

3.5 mL of 1 N HCl was added to all samples

Used Sodium Hydroxide (NaOH)

Used Acetic acid (HOAc)

Temperature Limits: 21 - 25 C

Fluid #1 pH Limits: 4.88 - 4.98 su

Fluid #2 pH Limits: 2.83 - 3.03 su

Extract filtered through 0.7um x 142mm TCLP filter paper

Calibration Table

NEW ICAL FOLLOWING REPLACEMENT OF OVLAMP. *gm*
HPLC04 METHOD 8310 *22 MAY 2006*

Calib. Data Modified : 5/22/2006 4:16:03 PM

Calculate : External Standard
Based on : Peak Area

Rel. Reference Window : 1.000 %
Abs. Reference Window : 0.200 min
Rel. Non-ref. Window : 1.000 %
Abs. Non-ref. Window : 0.250 min
Do not use Multiplier & Dilution Factor with ISTDs
Uncalibrated Peaks : not reported
Partial Calibration : Yes, identified peaks are recalibrated
Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear
Origin : Ignored
Weight : Equal

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :

Printout of recalibrations within a sequence:

Calibration Table after Recalibration

Normal Report after Recalibration

If the sequence is done with bracketing:

Results of first cycle (ending previous bracket)

Curtis & Tompkins Laboratories Sample Preparation Summary

23-AUG-2006 17:56

Batch Number : 116658
 Date Extracted : 22-AUG-2006
 Extracted by : Jessie O'Brien Mee
 Prep Method : 3520C

Analysis : 8310
 Bq Group : N/A
 Units : mL
 Clean-up :

Spike #1 ID : S4149D
 Spike #2 ID : S3553B
 Spike #3 ID :
 SGP Version : 8310w_rv6

LIMITED VOLUME SAMPLES (results should be regarded as estimated and 'J'-flagged' if < 2mL titrant used)

P: Phenolphthalein Alkalinity (using volume to pH 8.3)
T-P: Total Alkalinity minus Phenolphthalein Alkalinity

Carbonate Alkalinity = 2x the smaller of P or (T-P)
Bicarbonate Alkalinity = (T-2P) when P < (T-P)
Hydroxide Alkalinity = (2P-T) when (T-P) < P

Analysis:
Method:

Alkalinity
EPA 310.1

NARRATIVE REPORT
Method 1625M Semivolatiles

Curtis & Tompkins
2323 Fifth Street
Berkeley, CA 94710

08/30/06

Attn: Steve Stanley

PA Reference: 2706

Samples: NKGW04, DUP0816061B

Semivolatiles analysis:

The samples were extracted and analyzed by Method 1625C, modified for the lowest possible detection limits. A 10 gram aliquot was spiked with 0.1 ug of N-Nitrosodimethylamine-d6 and extracted by sonication. The sample extract was concentrated to a final volume of 1.0 mL and spiked with 0.1 ug of 2,2'-Difluorobiphenyl as an internal recovery standard. The extracts were analyzed by GC/MS with the mass spectrometer operating in the "Specific Ion Mode" for greater sensitivity and lower detection limits. The instrument was calibrated with five initial calibration standards ranging from 0.02 ug/mL to 1.00 ug/mL.

On-going Precision and Recovery

A laboratory blank (P&R) was spiked with 0.02 ug of NNDMA and 0.1 ug of its labeled analog, and extracted and analyzed like a sample for each extraction batch. Recoveries for NNDMA and its Label are within the method specified recovery limits for the P&R's associated with the samples.

Laboratory Blank

A laboratory blank was extracted and analyzed like the sample with each extraction batch. Laboratory blank 11714 contains NNDMA at a concentration of 0.0006 ug/L. The other laboratory blank associated with the samples has no NNDMA detected.

Samples

None of the sample has NNDMA detected at a concentration which exceeds the method detection limit.

Please contact Steve Parsons at (760) 496-2200 if there are any questions concerning this data package.

CASE NARRATIVE

Laboratory number: 188837
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio
Request Date: 08/18/06
Samples Received: 08/18/06

This hardcopy data package contains sample and QC results for twenty one water samples, requested for the above referenced project on 08/18/06. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

Pesticides (EPA 8081A):

High responses were observed for endrin ketone and methoxychlor in the ICV analyzed 08/25/06 22:36, the ICV analyzed 08/28/06 23:07, and the ICV analyzed 08/29/06 15:22; average ICV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for many analytes in the CCV analyzed 08/29/06 22:33 and the CCV analyzed 08/30/06 02:05. High responses were observed for many analytes in a number of CCVs; average CCV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low surrogate recoveries were observed for decachlorobiphenyl and TCMX in 1349MW102 (lab # 188837-004), LF5GW102 (lab # 188837-013), and the method blank/LCS for batch 116753; the corresponding decachlorobiphenyl surrogate recoveries were within limits. No other analytical problems were encountered.

Polychlorinated Biphenyls (PCBs) (EPA 8082):

Low surrogate recoveries were observed for TCMX in the MS/MSD of 1349MW100 (lab # 188802-001); the corresponding decachlorobiphenyl surrogate recoveries were within limits. No other analytical problems were encountered.

Polynuclear Aromatics by HPLC (EPA 8310):

Low recoveries were observed for benzo(a)pyrene, naphthalene, and pyrene in the MS/MSD of 1349MW100 (lab # 188802-001); the LCS was within limits. High recovery was observed for pyrene in the MSD of 1349MW100 (lab # 188802-001); the LCS was within limits, and this analyte was not detected at or above the RL in the associated sample. High RPD was also observed for pyrene in the MS/MSD of 1349MW100 (lab # 188802-001); this analyte was not detected at or above the RL in the associated sample. Response exceeding the instrument's

CASE NARRATIVE

Laboratory number: 188837
Client: Treadwell & Rollo
Project: 2893.04.51
Location: Presidio
Request Date: 08/18/06
Samples Received: 08/18/06

Polynuclear Aromatics by HPLC (EPA 8310):

linear range was observed for fluorene in the MS of 1349MW100 (lab # 188802-001). High surrogate recoveries were observed for 1-methylnaphthalene (UV) in the MS/MSD of 1349MW100 (lab # 188802-001). High surrogate recovery was observed for 1-methylnaphthalene (F) in the MSD of 1349MW100 (lab # 188802-001). No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A) Water:

High responses were observed for aluminum, beryllium, and magnesium in the CCV analyzed 08/24/06 20:37 and the CCV analyzed 08/24/06 22:01; these analytes were not detected at or above the RL in the associated samples. Low recoveries were observed for mercury in the MS/MSD of 1349MW100 (lab # 188802-001); the BS/BSD were within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Metals (EPA 6020) Filtrate:

High % difference was observed for calcium in the serial dilution of 1065PZ2A (lab # 188837-009). No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):

No analytical problems were encountered.

Alkalinity (EPA 310.1):

No analytical problems were encountered.

Sulfide (EPA 376.2):

Low recoveries were observed for sulfide in the MS/MSD of 1065PZ2A (lab # 188837-009); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Total Dissolved Solids (TDS) (EPA 160.1):

No analytical problems were encountered.

NDMA (EPA 1625):

Pacific Analytical, Inc. in Carlsbad, CA performed the analysis. Please see the Pacific Analytical, Inc. case narrative.

To: "Steven Stanley" <steve@ctberk.com>
Sent: Monday, August 21, 2006 12:38 PM
Subject: DW Samples

Hey Steve,

Please cancel the dissolved metals analyses associated with both DW samples. I don't think they filtered either.

Thanks.

Joshua D. Graber

COOLER RECEIPT CHECKLIST

Login#: 188837 Date Received: 8-18-06 Number of Coolers: 4
Client: Treadwell & Rollo Project: 2893.04.51

A. Preliminary Examination Phase

Date Opened: 8-18-06 By (print): Troy Windsor (sign) Troy Windsor

1. Did cooler come with a shipping slip (airbill, etc.)?..... YES ☒ NO ☐

If YES, enter carrier name and airbill number: _____

2. Were custody seals on outside of cooler?..... YES ☒ NO ☐

How many and where? 1 per over cooler lip Seal date: 8/18/06 Seal name: see below

3. Were custody seals unbroken and intact at the date and time of arrival?..... YES ☒ NO ☐

4. Were custody papers dry and intact when received?..... YES ☒ NO ☐

5. Were custody papers filled out properly (ink, signed, etc.)?..... YES ☒ NO ☐

6. Did you sign the custody papers in the appropriate place?..... YES ☒ NO ☐

7. Was project identifiable from custody papers?..... YES ☒ NO ☐

If YES, enter project name at the top of this form.

8. If required, was sufficient ice used? Samples should be 2-6 degrees C. YES ☒ NO ☐

Type of ice: wet Temperature: 2.4 2.7 3.1 3.3

B. Login Phase

Date Logged In: 8-18-06 By (print): Troy Windsor (sign) Troy Windsor

1. Describe type of packing in cooler: in ziploc type bags

2. Did all bottles arrive unbroken?..... YES ☒ NO ☐

3. Were labels in good condition and complete (ID, date, time, signature, etc.)?..... YES ☒ NO ☐ *

4. Did bottle labels agree with custody papers?..... YES ☐ NO ☐

5. Were appropriate containers used for the tests indicated?..... YES ☐ NO ☐

6. Were correct preservatives added to samples?..... YES ☐ NO ☐

7. Was sufficient amount of sample sent for tests indicated?..... YES ☐ NO ☐

8. Were bubbles absent in VOA samples? If NO, list sample IDs below..... YES ☐ NO ☐

9. Was the client contacted concerning this sample delivery?..... YES ☐ NO ☐

If YES, give details below.

Who was called? _____ By whom? _____ Date: _____

Additional Comments:

* B3 - No label on two containers for
sample - 008 → ID by process of elimination
No label on two containers for
sample - 009 → ID by association, they
were in a bag w/ a labeled bottle.

0.5 mL of TEH_SURR was added to all samples

0.5 mL of TEH_SP was added to all spikes

pH of all samples adjusted to pH ≤ 2 with H₂SO₄☒ Samples were continually extracted about 450 mL of CH₂Cl₂

Extraction Start Time:

Extraction End Time:

☐ Samples were extracted 3 times with 60 mL of CH₂Cl₂Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄

Concentrated to volumes as noted above
